

Sriram Rajagopalan

12 years across data engineering, analytics, and science. Now leading teams that do all three.
Greater Seattle Area · sriraraj19@gmail.com

EXPERIENCE

Data Science Manager

Jan 2024 – present

Amazon

Leads a 16-person Science and Analytics org (5 Data Scientists, 3 BI Engineers, and an Analytics Manager with 6 BIEs and 1 Data Engineer) across the US and India, supporting the Amazon Books business across two verticals: Product and Customer Growth Science, and Risk Science.

- Grew the team from 6 BI engineers to a 16-person multi-country org spanning three role families (DS, BIE, DE) across the US and India
- Launched 3 production risk models addressing collusion fraud, reader experience measurement, and the impact of AI-generated books, delivering significant cost savings for the business
- Influenced multiple Amazon KDP program launches and supports the multi-million dollar Kindle Unlimited business with science-based strategy and recommendations
- Drove AI transformation across all roles: AI-driven books risk management workflows enabling Ops to review 50+ attributes in real time, AI advisor flows surfacing trends during monthly business reviews, agentic workflows automating fraud checks, and natural-language self-service querying tools
- Owns end-to-end scope for both verticals: data infrastructure, metrics and dashboards, science deep dives, and ML models that inform product growth, proactive fraud enforcement, and policy updates

Senior Business Intelligence Engineer

Sep 2019 – Jan 2024

Amazon

Full-stack senior IC across three Amazon teams: employee experience measurement, Science and Design hiring market intelligence, and KDP product growth (2022 onward).

- Built employee experience measurement at scale, mapping employee journeys from onboarding to exit and surfacing pain points through metrics
- Supported the Science and Design hiring org's market intelligence team: analytics tools for hiring automation and a science/design talent repository integrating external data
- Joined the KDP org in 2022 in a hands-on product growth science role: the same charter his data scientists own today
- End-to-end IC ownership: data infrastructure, pipelines and architecture, dashboarding and automation, metric design and tracking, and statistical deep dives driving recommendations

Data Analyst

May 2017 – Sep 2019

IBM

HR organization, enterprise data migration.

- Supported a company-wide migration of HR systems from legacy platforms to Workday, building ETL jobs and validation scripts
- Owned multiple migrations end-to-end from the data engineering side

Data Engineer

Jan 2016 – Jul 2016

Perficient

Healthcare client, claims platform migration.

- Migrated a legacy claim processing system to a new platform and built the client's new data engineering framework
- Worked hands-on with sensitive healthcare data and domain workflows

Data Engineer

Jun 2013 – Jan 2016

Capgemini

US government client, unemployment system modernization.

- Built and optimized complex SQL and ETL workloads for a legacy-to-modern migration of a state unemployment system
- Handled critical-data workflows spanning ACH processing, claims, and insurance settlement

EDUCATION

Master of Science, Business Analytics and Project Management

Aug 2016 – Dec 2017

University of Connecticut School of Business

Bachelor of Engineering, Mechanical Engineering

Aug 2009 – Jun 2013

Velammal Engineering College, Chennai

SKILLS

- Leadership [PLACEHOLDER – Sriram to confirm: org building, multi-country teams, science strategy, AI adoption]
- Science & Analytics [PLACEHOLDER – Sriram to confirm: ML modeling, risk modeling, statistical deep dives, experimentation]
- Engineering [PLACEHOLDER – Sriram to confirm: SQL, ETL, data architecture, pipelines, dashboarding]
- AI Tooling [PLACEHOLDER – Sriram to confirm: agentic workflows, LLM tooling, natural-language analytics]
