EXPERIENCE

Data Science Manager Jan 2024 – Present

Amazon

Leads a 16-person, multi-country Science and Analytics organization (Data Scientists, BI Engineers, Data Engineers, and an Analytics Manager) owning dual charters for Amazon Books: Product & Customer Growth Science and Risk Science.

- Scaled the organization from a 6-person BI team into a 16-person science org spanning three disciplines and two countries (US, India), adding a second management layer and expanding the charter from reporting to production ML and applied science
- Launched 3 production risk models, targeting publisher-reader collusion fraud, reader-experience quality, and the marketplace impact of AI-generated books, delivering [METRIC: \$ saved / abuse reduction %] for the Books business
- Direct science strategy for Amazon KDP and the multi-million dollar Kindle Unlimited subscription business, shaping [METRIC: # of] product launches through deep dives, ML models, and data-backed recommendations adopted by product and policy teams
- Led AI-native transformation of every role on the team: shipped AI-driven risk workflows enabling Ops to evaluate 50+ signals in real time, agentic automation of fraud checks, AI advisors surfacing trends in monthly business reviews, and natural-language self-service analytics, [METRIC: hours saved / tickets deflected]
- Own end-to-end delivery across both verticals: data infrastructure, metric systems, dashboards, statistical deep dives, and ML models informing growth strategy, proactive enforcement, and policy

Senior Business Intelligence Engineer Sep 2019 – Jan 2024

Amazon

- Senior IC across three Amazon organizations; final two years in KDP product growth science, the charter his current team now owns.
- Drove product growth analytics for Amazon KDP (2022–2024): built the data infrastructure, metrics, and statistical deep dives behind customer and platform growth decisions, work that defined the charter of today's Growth Science vertical
 - Built employee-experience measurement at scale, instrumenting the employee journey from onboarding to exit and converting friction points into tracked metrics for leadership action
 - Delivered market-intelligence analytics for the Science & Design hiring organization: hiring-automation tooling and a talent repository integrating external data sources
 - Owned the full IC stack throughout: data architecture, ETL pipelines, dashboard automation, metric design, and statistical analysis driving recommendations

Data Analyst May 2017 – Sep 2019

IBM

HR organization; enterprise data migration.

- Engineered ETL and validation frameworks for a company-wide HR systems migration from legacy platforms to Workday, owning multiple migration workstreams end to end from the data side
- Completed an MS in Business Analytics (UConn) concurrently with full-time delivery

Data Engineer Jan 2016 – Jul 2016

Perficient

- Built the foundational data engineering framework for a healthcare client's claims-platform migration, working hands-on with regulated, highly sensitive healthcare data

Data Engineer Jun 2013 – Jan 2016

Capgemini

- Developed and optimized complex SQL and ETL workloads modernizing a US state unemployment system, owning critical-data workflows across ACH payment processing, claims, and insurance settlement

EDUCATION

Master of Science, Business Analytics and Project Management Aug 2016 – Dec 2017

University of Connecticut School of Business

Bachelor of Engineering, Mechanical Engineering Aug 2009 – Jun 2013

Velammal Engineering College, Chennai

SKILLS

- Leadership [PLACEHOLDER – Sriram to confirm: org building, multi-country teams, science strategy, AI adoption]
- Science & Analytics [PLACEHOLDER – Sriram to confirm: ML modeling, risk modeling, statistical deep dives, experimentation]
- Engineering [PLACEHOLDER – Sriram to confirm: SQL, ETL, data architecture, pipelines, dashboarding]
- AI Tooling [PLACEHOLDER – Sriram to confirm: agentic workflows, LLM tooling, natural-language analytics]
